

WL-1000 SERIES

INNOVATIVE NEW PRODUCT LAUNCH FOR MATERIAL HANDLING

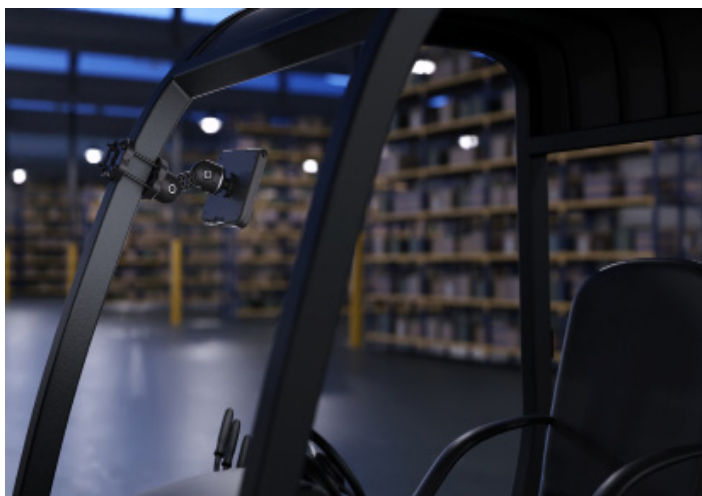

Bringing Rugged Technology Mounting To The Next Level

The WL-1000 Series by ENS is the easiest, most durable and flexible technology mounting system in the industry. Made with the latest advancements in engineered composite materials, the WL-1000 can handle any environmental conditions. From direct exposure to the elements to chilled freezer rooms, you can rest assured that the WL-1000 will not rust or crack under pressure. Simple installation and flexibility are just a couple of the attributes that set the WL-1000 apart from the rest. Whether installing on a forklift or in a static location, WL-1000 is the right choice for a mounting technology that needs to stay securely in place once installed, with the added flexibility to make ergonomic adjustments, on the fly, without tools.

Everything you need to mount an AMPS or VESA compatible device is included in the box. Intuitive attachment options for mounting scanners and tablets make the whole experience from ordering to installation a breeze. Although designed to meet the rigors of everyday life on a forklift, the WL-1000 can be installed on any structure that is 4" in diameter or less. Secure it once and leave it alone - the WL-1000 is there to stay.

WL-1000 KEY FEATURES

- ✓ Built for the longhaul using the latest polymer blends and alloys, the WL-1000 resists rust and maintains its structural integrity, even in the harshest environmental conditions
- ✓ Meticulously designed clamping mechanism securely affixes the WL-1000 to any square, rectangular or round pole up to 4" in diameter without the need to retighten over time
- ✓ Capable of securely holding devices up to 8lbs
- ✓ Easy installation - no need to drill holes that could jeopardise the integrity of the assembly. Simply tighten clamps around the structure and leave it alone
- ✓ Back-to-back installation allows for two devices to be held using a single bracket
